

MAP EXPLANATION

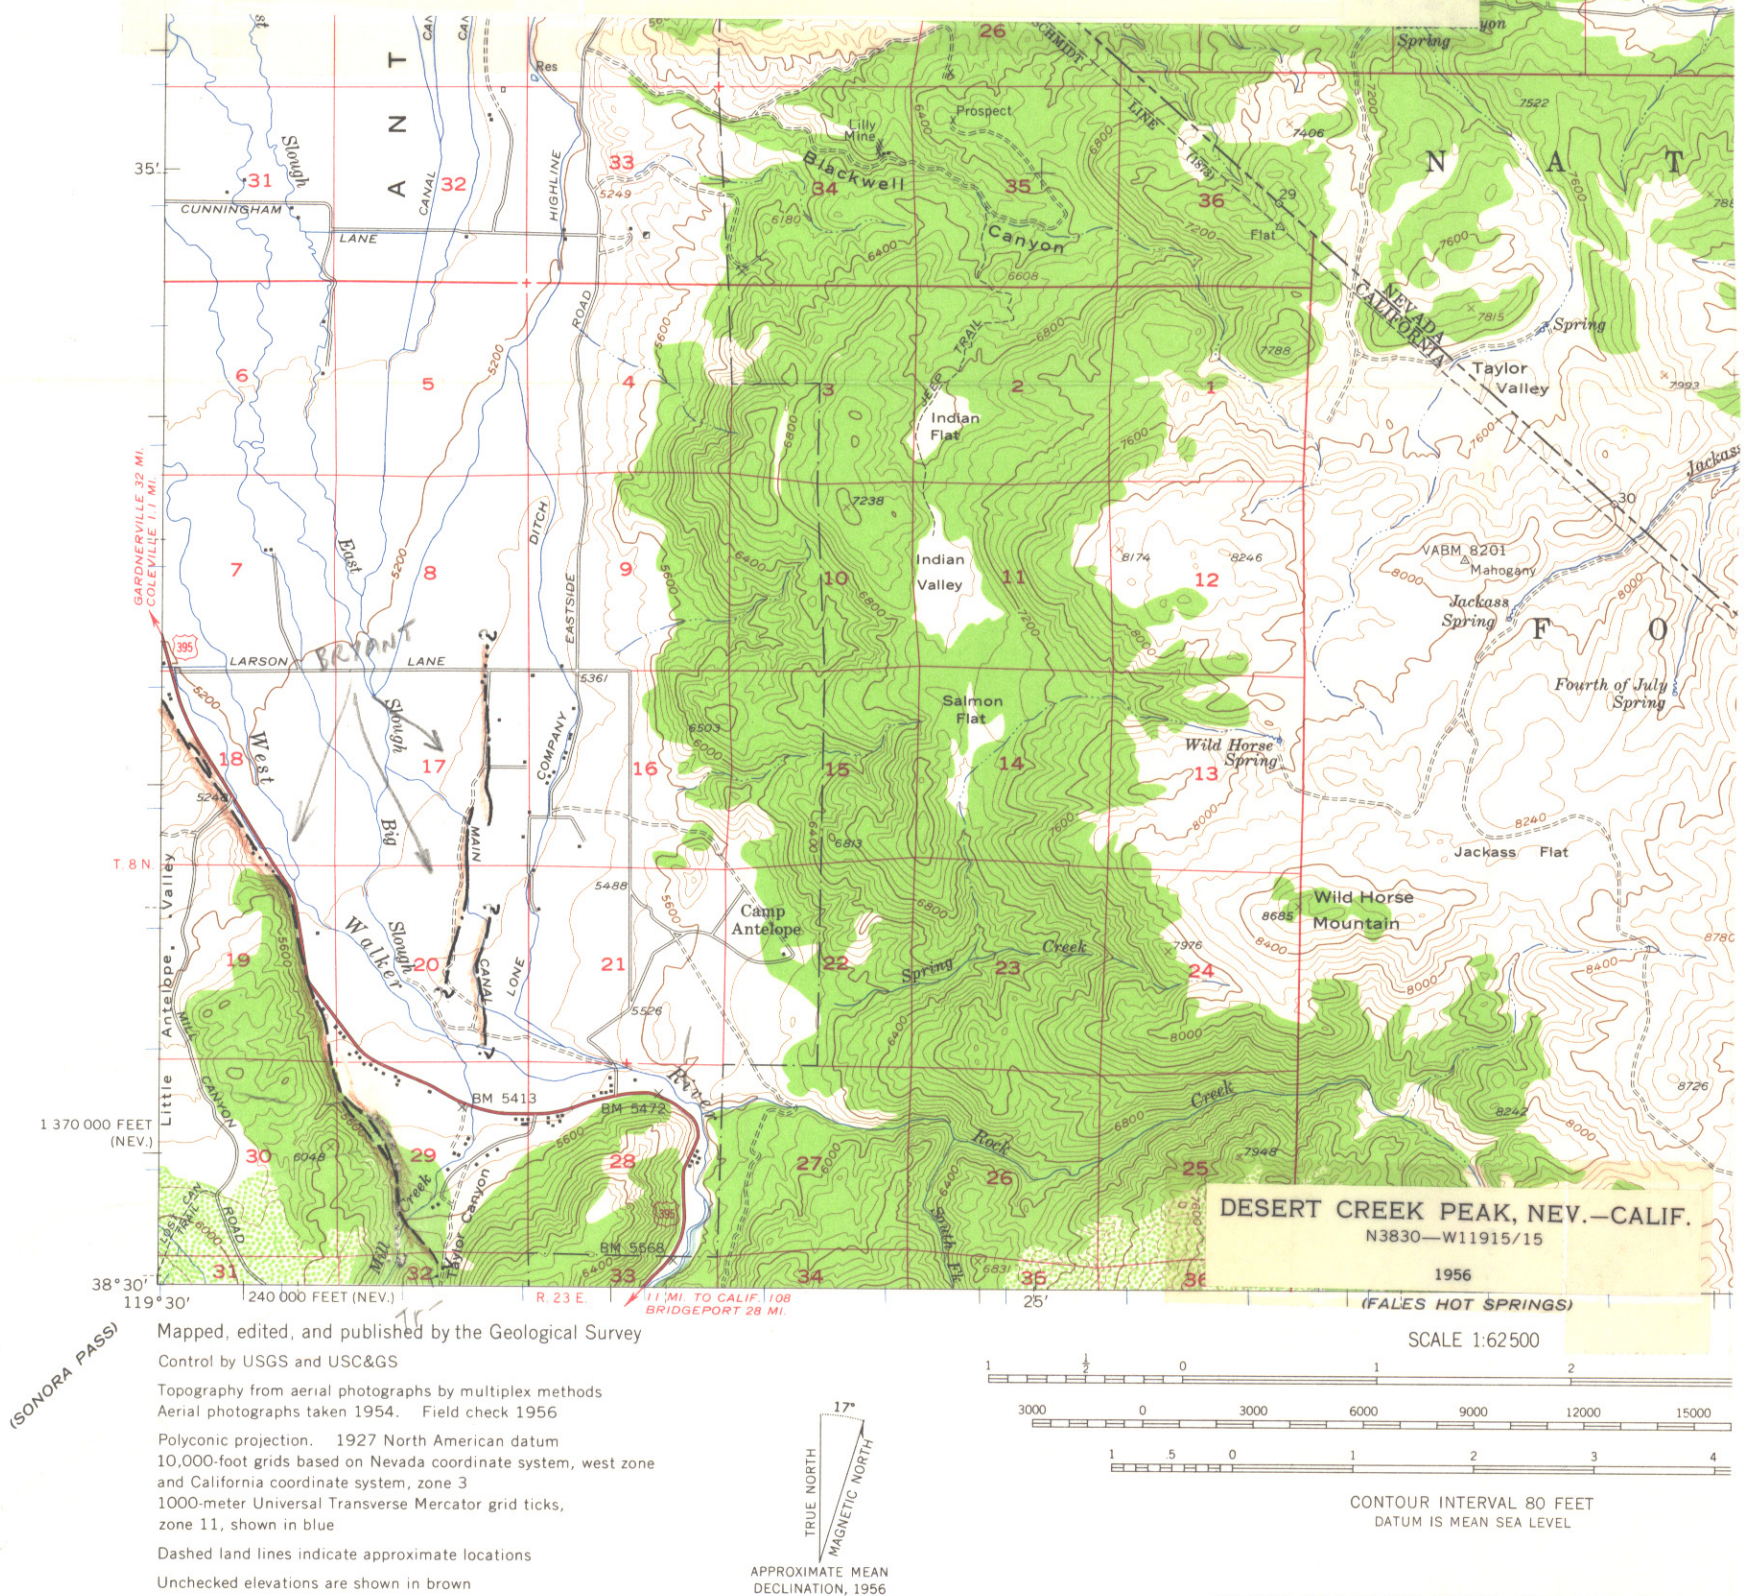

Faults considered to have been active during Holocene time; solid line where accurately located, long dash where approximately located, short dash where inferred, dotted where concealed; query indicates additional uncertainty.

SOURCE OF FAULT TRACES

- Bryant (this report)
- Clark (1972)
- Dohrenwend (1982)
- John, et al (1981)

Figure 5b (to FER-154). Faults in the Desert Creek Peak quadrangle recommended for zoning for special studies.

Mapped, edited, and published by the Geological Survey

Control by USGS and USC&GS

Topography from aerial photographs by multiplex methods

Aerial photographs taken 1954. Field check 1956

Polyconic projection. 1927 North American datum

10,000-foot grids based on Nevada coordinate system, west zone and California coordinate system, zone 3

1000-meter Universal Transverse Mercator grid ticks, zone 11, shown in blue

Dashed land lines indicate approximate locations

Unchecked elevations are shown in brown
